Perlage Commercial Champagne Systems from Rinaldini Distribution

Laguna Hills, California, December 12, 2008 – Perlage Systems, Inc., makers of the world's highly acclaimed first effective Champagne and sparkling wine preservation system, has appointed Rinaldini Distribution as its global master distributor of Perlage's commercial line of Champagne systems.

Available in both commercial and home versions, Rinaldini Distribution strives to increase Champagne by the glass programs in restaurants and hospitality environments worldwide.

Currently used in more than 1000 of the world's finest restaurants, Perlage quickly and safely restores the headspace of the bottle to the original pressure and composition of gases that existed before the cork was removed. According to Evan Wallace, founder of Perlage Systems, "By returning the headspace to its original condition the Champagne essentially doesn't 'know' it has been opened." Perlage preserves open bottles of Champagne for weeks, allowing establishments and consumers to open and enjoy premium champagnes risk free with no loss of quality, taste or effervescence. Perlage has been tested and approved by the finest sparkling wine producers in both France and California.

"Perlage is a great business asset for all hospitality industries. After so many advances in wine preservation, there is finally a real solution for preserving Champagne!" commented Roberto Rinaldini, President of Rinaldini Distribution, Inc., reputable distributor of the renowned Italian Enomatic wine serving system. "I am excited to see Perlage join alongside Enomatic, the world's leading automated wine preservation system, to provide not only premium wines but quality Champagnes by the glass."

Perlage commercial systems are now available worldwide and can easily be incorporated into any hospitality establishment. Contact Rinaldini Distribution to find a local distributor in your area.
